

Avadex[®] Factor

A herbicide for use on winter wheat, winter barley, spring wheat and spring barley

To access the Safety Data Sheet for this product scan the QR code or use the weblink:
<https://avadex.co.uk/index.php/avadex-factor>

Alternatively, contact your supplier.

A capsule suspension containing 450 g/L tri-alleate
FOR USE ONLY AS A PROFESSIONAL HERBICIDE for the control
of a range of weeds in listed cereals.

The (COSHH) Control of Substances Hazardous to Health
Regulations may apply to the use of this product at work.

51971-UK-AVXH-LF-19-0723 Item 79237

WARNING

May cause an allergic skin reaction.
May cause damage to organs through prolonged or repeated exposure.
Very toxic to aquatic life with long lasting effects.

Do not breathe spray.
Avoid release to the environment.
Wear protective gloves / protective clothing / eye protection / face protection.
IF ON SKIN: Wash with plenty of soap and water.
Get medical advice/attention if you feel unwell.
Repeated exposure may cause skin dryness or cracking.

To avoid risks to human health and the environment comply with the directions for use.
Dispose of contents / container to a licensed hazardous-waste disposal contractor or collection site except for empty clean containers which can be disposed of as non-hazardous waste.

IMPORTANT INFORMATION FOR USE ONLY AS A PROFESSIONAL HERBICIDE.

Crops	Max. individual dose (Product/hectare)	Max. number of treatments	Latest time of application	Horizontal boom sprayers fitted with 3* DRT
				Aquatic buffer zone (m)
Winter and spring wheat, winter and spring barley	3.6 litres	1 per crop	Pre-crop emergence	6 (See environmental protection section)

Other Specific Restrictions

This product must not be applied via hand-held equipment.
Low drift spraying equipment must be operated according to the specific conditions stated in the official three star rating for that equipment as published on HSE Chemicals Regulation Division's website. These operating conditions must be maintained until the operator is 30m from the top of the bank of any surface water bodies.

THIS PRODUCT IS NOT ELIGIBLE FOR BUFFER ZONE REDUCTION UNDER THE LERAP HORIZONTAL BOOM SPRAYERS SCHEME.

READ THE LABEL BEFORE USE. USING THIS PRODUCT IN A MANNER THAT IS INCONSISTENT WITH THE LABEL MAY BE AN OFFENCE. FOLLOW THE CODE OF PRACTICE FOR USING PLANT PROTECTION PRODUCTS.

Lot Number & Production Date : see packaging.

DIRECTIONS FOR USE

IMPORTANT: This information is authorised as part of the Product Label. All instructions within this section must be read carefully in order to obtain safe and successful use of this product.

Soil Type

Avadex[®] Factor may be used on soils containing less than 10% organic matter.

Seedbed and climate conditions

Apply Avadex[®] Factor to well prepared, moist seedbeds. Very cloddy seed-beds should be avoided. Loose, puffy seedbeds should be consolidated prior to drilling. Avadex[®] Factor needs some soil moisture to be activated. If winter cereals are drilled in very dry conditions, application should be delayed until more favourable soil moisture conditions occur. Where weather conditions are favourable at drilling and during early crop establishment, wild-oats can rapidly germinate and grow beyond the susceptible growth stage. Where this might occur, Avadex[®] Factor should be applied within 14 days of drilling.

Weeds Controlled

Effectiveness using three star drift reduction technology may be reduced.

Avadex[®] Factor herbicide controls wild-oats and moderate populations of black-grass, Italian rye-grass, and loose silky-bent. Where heavy populations of black-grass exist in winter crops of wheat and barley, use of a programme of herbicide treatments is recommended. Wild-oats germinating on or near the soil surface or from well below the treated layer may not be controlled.

Following Crops

Do not sow oats within a year or grass crops within 8 months after treating with Avadex[®] Factor. Do not undersow grass species in crops that have been treated with this product. It is safe to undersow with clover and other legumes. In the event of crop failure, it is recommended to sow winter or spring barley.

Mixing and Spraying

Shake well before use. Pour the required amount of Avadex[®] Factor into the spray tank half-filled with water. Fill the remainder of the spray tank with water to the desired level whilst using the agitation system. Maintain agitation during the spray operation. Use a water volume of 200 to 300 litres/hectare. Ensure uniform coverage of the soil with the spray solution. Avoid boom overlap and overdosing, as this may result in crop damage. Any crop damage resulting from spray boom overlap is likely to be transient and should not adversely affect crop yield.

Equipment and Cleaning

Following the completion of spray operations, the outside of the sprayer should be thoroughly cleaned and the spray-tank cleaned using a triple rinse procedure, with the addition of a proprietary tank-cleaner as part of the final rinse operation.

Crop Specific Information

Recommended use:

CROP	DEPTH OF DRILLING	APPLICATION RATE
Winter and spring barley	Minimum 2.5 cm	3.6 l/ha
Winter and spring wheat	4.0 cm	3.6 l/ha

For winter crops, apply post-drilling but pre-emergence of the crop and weeds. Spring barley can be applied pre-drilling and incorporated with final seedbed cultivation or post-drilling, pre-emergence of crop and weeds. Where control is required of moderate to heavy populations of annual grasses, Avadex[®] Factor should be used in sequence with other herbicides so long as the labels of each product are followed.

Resistance

Strains of some annual grasses (e.g. black-grass, wild-oats and Italian rye-grass) have developed resistance to herbicides which may lead to poor control. A strategy for managing and preventing such resistance should be developed. Guidelines have been produced by the Weed Resistance Action Group and copies are available from the AHDB, HRAC, your distributor, crop advisor or product manufacturer. Avadex[®] Factor should only be used for control of herbicide resistant strains of annual grasses as part of an appropriate management strategy, including cultural control methods and sequences with herbicides of alternative modes of action.

Key aspects of the Avadex® Factor resistance management strategy are: Always follow WRAG guidelines for preventing and managing herbicide resistant grass weeds.

Maximise the use of cultural control measures wherever possible (e.g. crop rotation, ploughing, stale seedbeds, delayed drilling). Use a programme of tank mixes or sequences of herbicides with different modes of action within individual crops, or successive crops.

Where products are approved for both pre- and post-weed emergence applications, apply pre-emergence where possible when resistance is suspected.

Apply post-emergence products/mixtures to small, actively growing weeds, especially where high levels of resistance are suspected and to reduce the risk of resistance development.

Monitor weed control effectiveness and investigate any odd patches of poor grass weed control. If unexplained, contact your agronomist who may consider a resistance test appropriate.

EXTENSION OF USE

These extensions of the authorised use provide for the use of the Avadex® Factor in respect of crops and situations, other than those included on the product label [above]. No efficacy or phytotoxicity data have been assessed and as such the 'extension of use', is at all times done at the user's choosing, and the commercial risk is entirely theirs. Users are required to be in possession of the relevant EAMU details.

Crops / situations:	Maximum individual dose: (Product / ha)	Maximum number of treatments: (per crop)	Latest time of application	Aquatic buffer zone distance (meters)
Winter and spring linseed, Canary seed (grown for wild bird seed production)	3.6 litres	1 per crop	Pre-crop emergence	6

MEDICAL ADVICE

Health Effects

Accidental over exposure may result in the following symptoms: Skin & eyes: Slight irritation.

Inhalation: Solvent: Excessive exposure to HAN can result in headache, dizziness, incoordination, nausea, loss of appetite and unconsciousness. If you should feel unwell seek medical advice - show the label where possible.

24 HOUR EMERGENCY TELEPHONE NUMBER : +44 (0) 870 820 0418

First Aid

When giving first aid always use personal protective equipment if you are likely to be contaminated by contact with the person to whom you are giving aid - see Operator protection. Remove patient to fresh air.

Skin

Take off immediately all contaminated clothing. Wash immediately with plenty of soap and water. If there is persistent irritation, get medical attention.

Eyes

Flush immediately with plenty of clean water for at least 15 minutes. If there is persistent irritation, get medical attention.

Inhalation

Seek medical treatment if symptoms occur apparently due to inhalation. If breathing is difficult, give oxygen. Give artificial ventilation if breathing stops.

SAFETY PRECAUTIONS

Operator protection

Engineering control of operator exposure must be used where reasonably practicable, in addition to the following personal protective equipment:

WEAR SUITABLE PROTECTIVE CLOTHING (COVERALLS) AND SUITABLE PROTECTIVE GLOVES when handling the concentrate. However, engineering controls may replace personal protective equipment if a COSHH assessment shows that they provide an equal or higher standard of protection.

AVOID CONTACT WITH SKIN.

WASH CONCENTRATE from skin or eyes immediately.

WASH HANDS AND EXPOSED SKIN before meals and after work.

WHEN USING DO NOT EAT, DRINK OR SMOKE.

IF YOU FEEL UNWELL, seek medical advice immediately (show label where possible).

Environmental protection

To protect aquatic organisms, respect an unsprayed buffer zone to surface water bodies as specified for the crop.

HORIZONTAL BOOM SPRAYERS MUST BE FITTED WITH THREE STAR DRIFT REDUCTION TECHNOLOGY FOR ALL USES.

Low drift spraying equipment must be operated according to the specific conditions stated in the official three star rating for that equipment as published on the HSE Chemicals Regulation Directorate's website. Maintain three star operating conditions until 30m from the top of the bank of any surface water bodies. Avoid spray drift onto adjacent crops, especially crops of oats and grasses, either emerged or yet to emerge, as these are particularly sensitive. Extreme care must be taken to avoid spray drift on to non-crop plants outside of the target area.

DO NOT ALLOW DIRECT SPRAY from horizontal boom sprayers to fall within the distance specified for the crop to the top of the bank of a static or flowing water body, or within 1 m of the top of a ditch which is dry at the time of application. Aim spray away from water. **NOTE: BUFFER ZONES OF MORE THAN 5 m CANNOT BE REDUCED UNDER THE LOCAL ENVIRONMENT RISK ASSESSMENT FOR PESTICIDES (LERAP) SCHEME.**

The statutory buffer zone must be maintained and the distance recorded in Section A of the LERAP record form. The LERAP record form must be kept available for three years.

Storage and disposal

DO NOT RE-USE CONTAINER for any purpose.

KEEP AWAY FROM FOOD, DRINK AND ANIMAL FEEDING STUFFS.

KEEP OUT OF REACH OF CHILDREN.

KEEP IN ORIGINAL CONTAINER, tightly closed, in a safe place.

RINSE CONTAINER THOROUGHLY by using an integrated pressure rinsing device or manually rinsing three times. Add washings to sprayer at time of filling and dispose of safely.

Protect from frost. Keep dry and free from frost in a suitable pesticide store.

Dispose of contents/container to a licensed hazardous-waste disposal contractor or collection site except for empty clean containers which can be disposed of as non-hazardous waste.

The statutory buffer zone must be maintained and the distance recorded in Section A of the LERAP record form. The LERAP record form must be kept available for three years.
