Avadex Excel 15G (15 kg/ha)

Base Programme

APPLICATOR GUIDANCE

Check, monitor and maintain applicator pipe work and deflector plates.

Calibrate regularly, at least at the start of each season.

Operate at appropriate speeds as defined in individual manufacturer's recommendations.

DO NOT use spinning disc applicators.

A list of contractors can be found at uk.gowanco.com

A KEY ROLE IN RESISTANCE MANAGEMENT

Herbicide resistance is a serious challenge to successful grass-weed management.

Avadex Excel 15G is the cornerstone in a grass weed herbicide programme. It brings a different mode of action, which is essential to protect many of the newer herbicide options and maximize weed control.

BEST PRACTICE

Apply at 15 kg/ha in all crops, winter or spring.

Make sure wheat is drilled 4cm deep.

Do not apply in strong winds as this can disrupt the spread pattern.

Do not sow oats or grass within one year of applying Avadex.

Buffer zone: 10m aquatic from the top of the bank of static or flowing water body. 1m from the top of a ditch that is dry at the time of application.

SEED BEDS AND SOIL TYPES

Apply to soils containing less than 10% organic matter.

Whilst being one of the more robust products in dry conditions, some moisture is required for the activation of **Avadex Excel 15G**.

Apply to well prepared consolidated, moist seedbeds.

Avadex[®] Excel 15G

Avadex contains tri-alleate. Avadex[®] is a registered trademark of Gowan Crop Protection Limited.
